

H100 Topical Gel Prescriber Information

- **Ideal patient** has mild to moderate symptoms <12-18 months duration (acute phase).
- **Best results seen** with multimodal, non-invasive approach combining **H100™ gel** and penile traction or stretching exercises.
- **H100 Topical gel ingredients** - nicardipine (affects collagen deposition and remodeling), **superoxide dismutase** (affects inflammatory cascade) and **ultra-purified Emu oil** (lipid rich carrier, scar remodeling properties).
- **Double blind pilot study shows statistically significant improvement in all endpoints** - decreased curvature, increased stretched penile length and decreased pain.
- **New tissue study demonstrates H100 penetration into tunica in patients with acute and chronic PD.**
- Dispensed in easy to use, metered dose dispenser.
- Apply **twice daily** to the penile shaft.
- Patients strongly encouraged to perform daily **penile stretching / modeling exercises** 2-3x daily as shown on website for best results.
- Only reported **side effect** is mild rash.
- **6 months of treatment recommended**, but results may likely be seen after 3 months of treatment.
- **Cost** - \$870 / 3-month supply.
- **Easy to order through PDLabs** – pdlabsrx.com or fax 512-219-0943
- For full patient information, see our website at Hybridmedical.org.
